

NEW NAME FOR *DACTYLODISCUS* KAMEGAI,
1971, PREOCCUPIED

Satoru KAMEGAI

(Meguro Parasitological Museum, Tokyo)

KAMEGAI (1971, *Res. Bull. Meguro Parasit. Mus.* No. 5, pp. 1-5) established a new genus and a new family Dactylodiscidae. This generic name being preoccupied by *Dactylodiscus* OLSSON, 1893 (Vermes, Monogenea) which is now regarded as a synonym of *Tetraoncus* DIESING, 1858. A new substitute name *Neodactylodiscus* for the genus is proposed for it and the family name becomes Neodactylodiscidae accordingly. Thus *Dactylodiscus latimeris* KAMEGAI, 1971 and Dactylodiscidae KAMEGAI, 1971 become *Neodactylodiscus latimeris* (KAMEGAI, 1971) nom. nov., Neodactylodiscidae (KAMEGAI, 1971) nom. nov. respectively.
